## User Flow Diagram

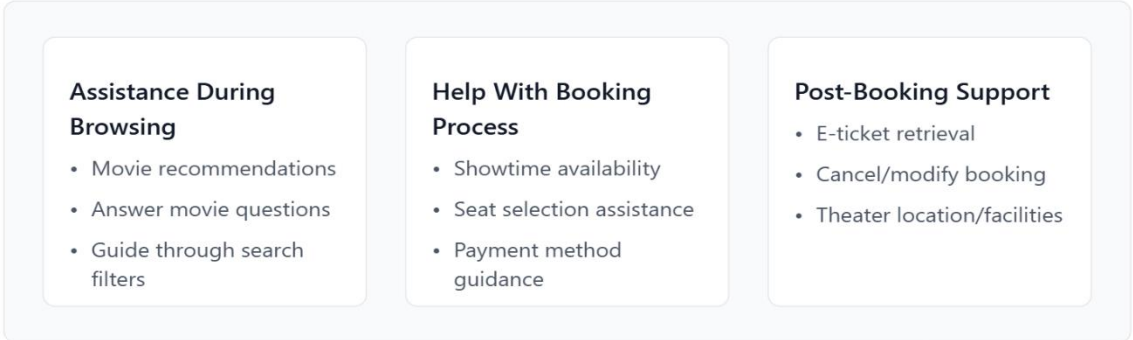

### Authentication Flow

### Booking Flow

### AI Chatbot Interaction

## Admin Dashboard Flow

### Admin Authentication

#### 1. Admin Login

- Secure admin credentials
- Two-factor authentication
- Role-based access control

#### 2. Access Dashboard

- Overview of system metrics
- Quick access to key functions
- Admin notifications center

### Movie Management

#### 1. Add New Movies

- Enter movie details
- Upload images/trailers
- Set release date
- Assign categories/tags

#### 2. Schedule Showtimes

- Select movie and theater
- Set date and time
- Configure ticket pricing
- Manage recurring schedules

#### 3. Manage Active Movies

- Edit movie information
- Update showtimes
- Remove expired listings
- Movie performance metrics

### Booking & Theater Management

#### 1. Monitor Bookings

- View all current bookings
- Filter by movie/showtime
- Handle booking modifications
- Process refunds if needed

#### 2. Manage Theaters & Screens

- Add/edit theater locations
- Configure screen layouts
- Set seat categories/pricing
- Manage theater maintenance

### Analytics & Reporting

#### 1. Sales Reports

- Daily/weekly/monthly revenue
- Sales by movie/theater
- Payment method analytics
- Export financial data

#### 2. Attendance Analytics

- Theater occupancy rates
- Peak time analysis
- Popular movie metrics
- Customer demographic data

#### 3. User Behavior Insights

- Booking patterns
- User engagement metrics
- Chatbot interaction analysis
- Customer feedback reports

# Database Schema

## Database Schema (MongoDB)

### Collections Overview

#### Users Collection

name:	String (required, trim)
email:	String (required, unique)
password:	String (required)
timestamps:	true

#### Movies Collection

title:	String (required)
description:	String (required)
posterUrl:	String (required)
backdropUrl:	String (required)
rating:	Number (required)
duration:	String (required)
language:	String (required)
genres:	[String] (required)
releaseDate:	String (required)
isNewRelease:	Boolean (default: false)
comingSoon:	Boolean (default: false)
availableCities:	[String] (required)

#### Theaters Collection

name:	String
location:	String
city:	String
screens:	Number

#### Showtimes Collection

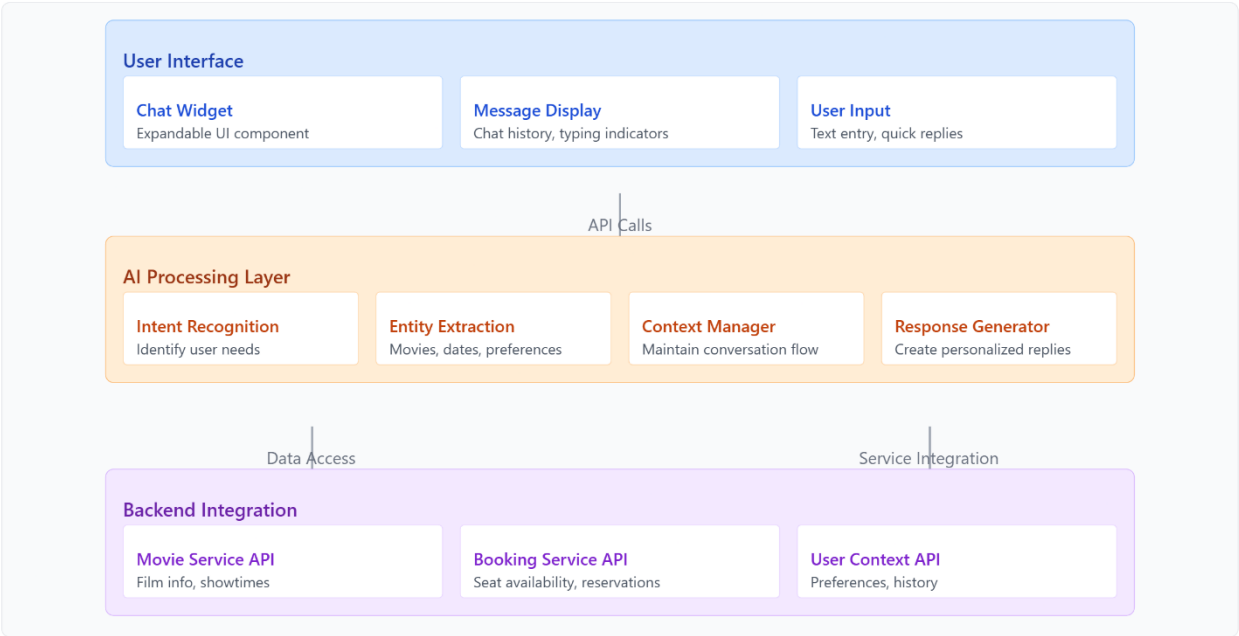

movieId:	ObjectId (ref: Movie)
theaterId:	ObjectId (ref: Theater)
date:	String (required)
time:	String (required)

#### Bookings Collection

bookingId:	String (required)
paymentId:	String (required)
userId:	ObjectId (ref: User)
movieTitle:	String (required)
showtime:	Object (date, time)
theater:	Object (name, location)
selectedSeats:	[String]
totalAmount:	Number
status:	String (default: 'Pending')
timestamps:	true
